

# Introducing Technology Responsibly

The children from pre-primary should get awareness about computer

**Leader Name** : Mrunal Raiborde  
Londhe

**Leader Designation:** Headmistress

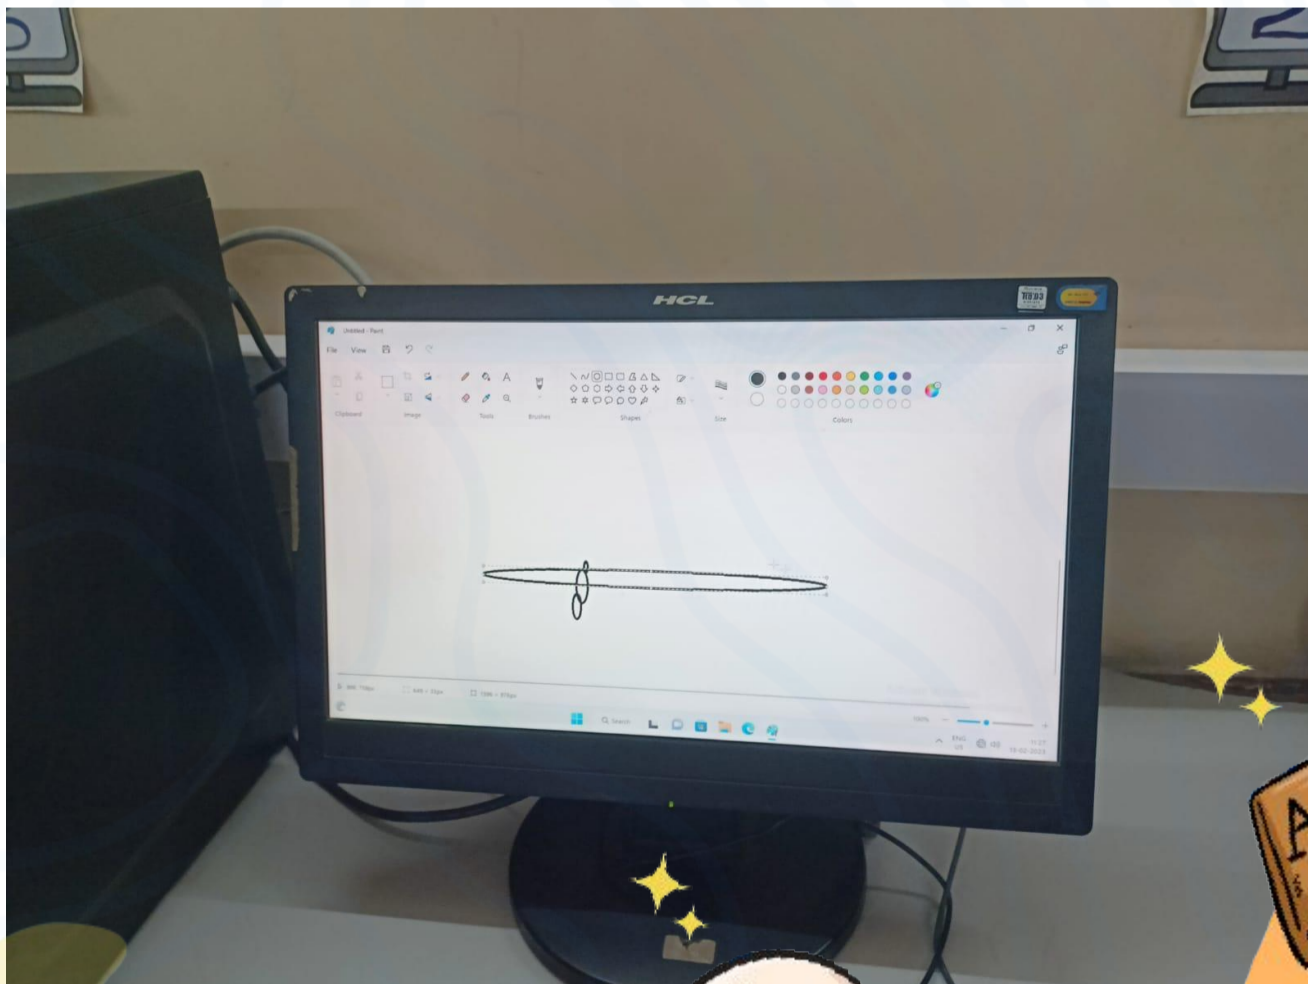

**School Name:** Vanita Vishram  
Primary School

**Location** : Mumbai, India

# Testimonial

*“After introducing computer as a subject in the pre-primary section, the students are engaging in the lectures and are getting aware about computers and its different parts and use it.”*

**- Mrunal Raiborde Londhe**  
**Headmistress**

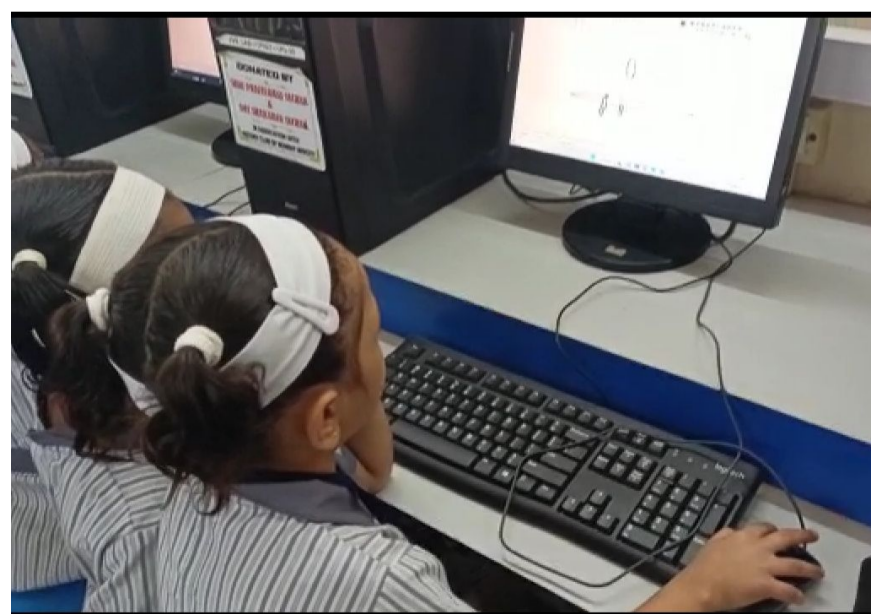

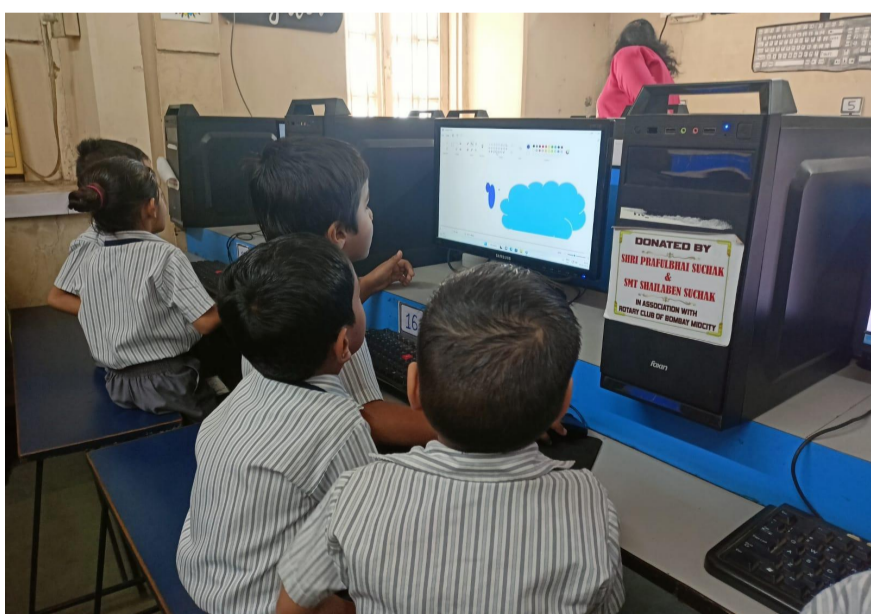

# The Challenge

The first encounter with technology can be daunting for young students, as they are often unsure how to operate a computer, mouse or interact with a screen. By introducing computer literacy skills at the pre-primary level, we can provide students with a foundational understanding of technology.

# The Change

Children from nursery, junior KG and senior KG are able to hold the mouse. They are able to identify the keys in the keyboards and are able to use it.

# Project Steps

1. The principal noticed that the first grade students didn't have the basic awareness of a computer and didn't know how to use the mouse.
2. Then the principal thought to introduce computers as a subject for the pre-primary. This would give a hands-on experience for the children to know about the computer and its parts, while being able to use it.
3. The teachers were told about the initiative.
4. The computer subject was put up in the time-table.
5. The future plan for this initiative is to correlate the computer subject with other subjects also.
